

FalconGrid Power Division

Internal Asset Inventory — Project Sentinel (OT Modernization Program)

Document ID:	FG-OT-2026-0143	Classification:	Internal
Prepared by:	OT Engineering, FalconGrid Power Division	Last Updated:	2026-02-18
Program:	Project Sentinel	Version:	1.3 (Draft)

1. Overview

Project Sentinel is FalconGrid Power Division's ongoing operational technology (OT) modernization initiative, covering remote monitoring and control gateways deployed across power generation and substation sites. This document provides an internal reference inventory of Sentinel-class gateway assets for engineering and vendor-support use. This document is not intended for distribution outside FalconGrid Power Division.

2. Sentinel Gateway Deployment Summary

Sentinel gateways provide bridging between legacy SCADA/Modbus field devices and the central FalconGrid OT monitoring platform. As of this revision, gateway devices are provisioned on the internal engineering segment **192.168.1.0/24**, with remote diagnostic access managed via the internal hostname range **sentinel-gw*.falcongrid-corp.local**. Field rollout began in Q3 2025 and is scheduled to complete across all Phase 1 sites by end of Q2 2026.

Asset Tag	Site	Device Role	Segment	Status
FG-SNT-014	Substation North-3	Sentinel Gateway (Modbus/TCP)	192.168.1.0/24	Active
FG-SNT-015	Substation North-3	HMI Relay	192.168.1.0/24	Active
FG-SNT-021	Generation Unit 2	Sentinel Gateway (Modbus/TCP)	192.168.1.0/24	Active
FG-SNT-022	Generation Unit 2	Engineering Workstation	192.168.1.0/24	Active
FG-SNT-030	Substation East-1	Sentinel Gateway (Modbus/TCP)	192.168.1.0/24	Commissioning

3. Remote Access & Identification Notes

For field support purposes, Sentinel gateways identify themselves on the internal network with the HTTP service banner title **"FalconGrid Sentinel Gateway"**. This identifier should be used by OT engineering staff to distinguish Sentinel-managed assets from legacy monitoring equipment during troubleshooting. Any Sentinel gateway found responding outside of the 192.168.1.0/24 segment, or on a public-facing interface, should be reported immediately to OT Security.

4. Distribution

This inventory is maintained by FalconGrid Power Division OT Engineering and is intended solely for internal engineering and authorized vendor support personnel working under Project Sentinel. Contact: ot-engineering@falcongrid-corp.example for access questions.
